

HYGIENIC FOOT PULL

SAB-HFP01-SSS

COVID-19 has caused a dramatic increase in the need for products that can limit the spread of harmful and unhealthy bacteria. Sabre has introduced a new hygienic foot pull that is installed on the pull side of the door, limiting the need to use your hands to open the door. Although this idea was based around hygiene, it is also an ideal door accessory for instances where the user's hands are occupied making it difficult to open the door by hand.

- Easy installation
- Can be fitted onto timber or metal doors up to 50mm thick
- Installed in the bottom rail of the door
- Small serrations on the plate allow grip
- 2 small rubber tips act as door stops.
- Made from 3.0mm SS304 grade stainless steel.
- Appropriate fixing screws are supplied.

*Care should be considered depending on the material of the door you are fixing the foot pull to.
